

Press Release:

### **Cubro Unveils All-in-One Monitoring And Troubleshooting Tool – EXA8 at It-sa 2019**

**Vienna 18.09.2019**, Cubro Network Visibility, a leading vendor of network packet brokers and network taps, will be participating in It-sa this year with its partner dhs Elmea tools. Cubro will introduce its new product EXA8 at the IT Security and Expo event being held from 08 Oct until 10 Oct in Nuremberg, Germany.

The Cubro EXA8 is an all in one portable monitoring and troubleshooting tool which aims to address the needs of enterprise customers and network engineers for a fail-safe network tapping, traffic capture, and troubleshooting platform. Other companies, including H5 Audit and QXIP, are partnering with Cubro to use the device for everything from Application Performance Monitoring, to VoIP Analysis, to Lawful Intercept Agents. The interesting thing about the EXA8 is that it is a platform that can be leveraged to bring all kinds of network monitoring, troubleshooting, and security applications to life.

Enterprises need a more intelligent network security and monitoring approach which provides granular visibility down to the link layer. Network speeds and feeds are increasing to 100G; the traffic mix includes voice, video and data and therefore enterprises need to make sure that all of this can be understood and analysed by network monitoring. It is possible to manage the EXA8 not only remotely but wirelessly with the addition of 4G or Satellite modems. Given the small, portable form factor, low power consumption, and economical cost of the EXA8, it becomes a very compelling option for remote and distributed deployments.

During the event, Cubro will also announce #ElevateTheEXA8 Challenge to introduce EXA8 hardware platform to the open-source community. Developers, designers, engineers, IT professionals, and students can turn their passion into reality and get an opportunity to develop a new application for the community. The winner would win \$5000, an EXA8, on which the application would be developed, and will be featured in the Cubro Blog. Come and meet us at the event at **Hall 10.1 / 10.1-719** and learn more about the contest and the versatile hardware platform.

#### ***About Cubro Network Visibility***

Cubro provides a comprehensive set of network visibility solutions that are efficient, cost-effective, and performance-oriented. With products that enable total network visibility into your traffic, we can enhance and support deployments in the Telecommunications, ISP, Data Centre, Enterprise, and Government spaces whether it be in virtualised or physical environments. Cubro will assist you in bringing your network performance and security monitoring efforts to their peak level and unlock valuable insights into your network traffic. For more information, check our website <https://www.cubro.com/en/>.
